## Transistor-Level Circuit Understanding

For the following switch level circuit, complete the truth table computed. If a floating or shorted output is detected, indicate that in the truth table. If no floats or shorts are detected, write the Boolean expression computed by the circuit.

| A | B | C | Out |
| :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | $\mathbf{1}$ |
| 0 | 0 | 1 | $\mathbf{1}$ |
| 0 | 1 | 0 | $\mathbf{0}$ |
| 0 | 1 | 1 | $\mathbf{0}$ |
| 1 | 0 | 0 | $\mathbf{1}$ |
| 1 | 0 | 1 | $\mathbf{1}$ |
| 1 | 1 | 0 | $\mathbf{0}$ |
| 1 | 1 | 1 | $\mathbf{1}$ |

"Out" is " 1 " if $B$ is " 0 " or $A$ ' and $C$ ' are both " 0 ".

Write the Boolean expression for this function, Out $=\underline{\mathbf{B}^{\prime}+\mathbf{A}^{\mathbf{\prime}} \mathbf{C}^{\boldsymbol{\prime}}}$
$\qquad$ Answers $\qquad$

Given the Boolean expression: Out $=\mathrm{A}^{\prime} \mathrm{C}+\mathrm{ABC}=\mathbf{C}\left(\mathbf{A}^{\prime}+\mathbf{A B}\right)=\mathbf{C}\left(\mathbf{A}^{\prime}+\mathbf{B}\right)$ (if logic expression is not simplified, there should be 10 FET's below)
Complete the truth table.

| A | B | C | Out | Note |
| :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | 0 |  |
| 0 | 0 | 1 | 1 | $A^{\prime} \mathrm{C}=1$ |
| 0 | 1 | 0 | 0 |  |
| 0 | 1 | 1 | 1 | $A^{\prime} \mathrm{C}=1$ |
| 1 | 0 | 0 | 0 |  |
| 1 | 0 | 1 | 0 |  |
| 1 | 1 | 0 | 0 |  |
| 1 | 1 | 1 | 1 | $\mathrm{ABC}=1$ |

Draw the CMOS transistor diagram. Assume $\mathrm{A}, \mathrm{A}^{\prime}, \mathrm{B}, \mathrm{B}$ ', $\mathrm{C}, \mathrm{C}$ ' signals are available.

$\qquad$ Answers $\qquad$

Given the truth table.

| A | B | C | Out |
| :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | 0 |
| 0 | 0 | 1 | 0 |
| 0 | 1 | 0 | 0 |
| 0 | 1 | 1 | 1 |
| 1 | 0 | 0 | 0 |
| 1 | 0 | 1 | 1 |
| 1 | 1 | 0 | 1 |
| 1 | 1 | 1 | 1 |

Write the Boolean expression as 3 terms: Out $=\mathbf{A B}+\mathbf{B C}+\mathbf{A C}$ from observation that Out is " 1 " whenever any two inputs are one).

By the minterm approach: $\quad$ Out $=A^{\prime} B C+A B{ }^{\prime} C+A B C '+A B C$
Using Boolean Equalities: $\mathrm{A}^{\prime} \mathbf{B C}+\mathrm{ABC}=\mathrm{BC}$ and $\mathrm{ABC}=\mathrm{ABC}+\mathrm{ABC}+\mathrm{ABC}$

$$
\mathbf{O U T}=\mathbf{A B}+\mathbf{B C}+\mathbf{A C}
$$

Draw the CMOS transistor diagram. Assume $\mathrm{A}, \mathrm{A}^{\prime}, \mathrm{B}, \mathrm{B}$ ', $\mathrm{C}, \mathrm{C}$ ' signals are available.

$\qquad$ Answers $\qquad$

Bonus - use a Karnaugh map to find the simplest logic expression for Problem 3. There are three Essential Prime Implements, AC (blue), BC (green), and AB (red).

| $\mathrm{A} \backslash \mathrm{BC}$ | 00 | 01 | 11 | 10 |
| :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | 1 | 0 |
| 1 | 0 | 1 | 1 | 1 |
